1st October, 1955.

Dear

Yesterday I think I gave you the impression that the second shot at Montebello will be about 80 K.T. This is the figure to which we are working as far as health and safety are concerned. We do not know exactly what the yield is going to be because the assembly is very different from anything that we have tried before. We expect that the yield will be 40 or 50, but it might just go up to 80 which is the safe upper limit.

The first shot should be between 10 and 20 K.T. This time as far as health and safety are concerned we are working on 25.

Yours sincerely,

W. G. PENNEY

Sir Edwin Plowden, K.C.B., K.B.E.,  
U.K.A.E.A.,  
St. Giles Court,  
London, W. C. 2.
